Revision History

| Revision | Date | Description |
|----------|---------|--|
| Rev 2.2 | 04/2016 | <ul style="list-style-type: none"> • Added the OW cat command description. • Added the PD (PTT DELAY) cat command description. • Updated the MA, MB and RF cat command descriptions with CWR information. • Added to the settings menu list the description of the PTT DELAY menu, number 57. • Added the transmission source section for AM, FM and SSB modes (see 5.10 - Transmission source). • Updated firmware versions table. |
| Rev 2.3 | 06/2016 | <ul style="list-style-type: none"> • Updated the picture in the section 5.1.1.2 - E1 Receiver Settings with the AGC Threshold parameter. • Updated the section 5.2 - Split Functionality. • Added to the 5.9 - Settings Menu List section the description of the PTT ON CW menu, number 58. • Added the TC (PTT ACTION FOR CW) and SP (SPLIT) cat commands descriptions. • Updated the section 8.4 - User interface (UI) firmware update. • Updated the firmware versions table. |
| Rev 2.4 | 11/2017 | <ul style="list-style-type: none"> • Added Product Warranty |
| Rev 2.5 | 11/2017 | <ul style="list-style-type: none"> • Added the CD (CW Delay), TH (AGC Threshold), FF (FX FUNCTIONS) and TR (PTT with RTS) cat commands descriptions. • Moved Firmware Update section in another document. • Updated the firmware versions table. |
| Rev 2.6 | 12/2017 | <ul style="list-style-type: none"> • Added the FM MODE menu description, see 5.1.1.8 - Change Operating Mode and 5.9 - Settings Menu List. • Updated firmware versions table. |

1 Overview

1.1 Notice

Amateur radio regulations vary from country to country. Check your local amateur radio regulations and requirements before operating the ELAD FDM-DUO.

1.2 Firmware versions

The features described in this manual refers to the following firmware versions :

| RX Demodulator | TX Modulator | User Interface | USB Interface | FPGA |
|-------------------------------|-------------------------------|-------------------------------|-------------------------------|-------------------------------|
| Ver. 1.49 Date: 11/23/2017 | Ver. 1.28 Date: 06/06/2016 | Ver. 4.73 Date: 12/21/2017 | Ver. 4.09 Date: 05/28/2015 | Ver. 2.00 Date: 07/30/2014 |

1.3 Introduction

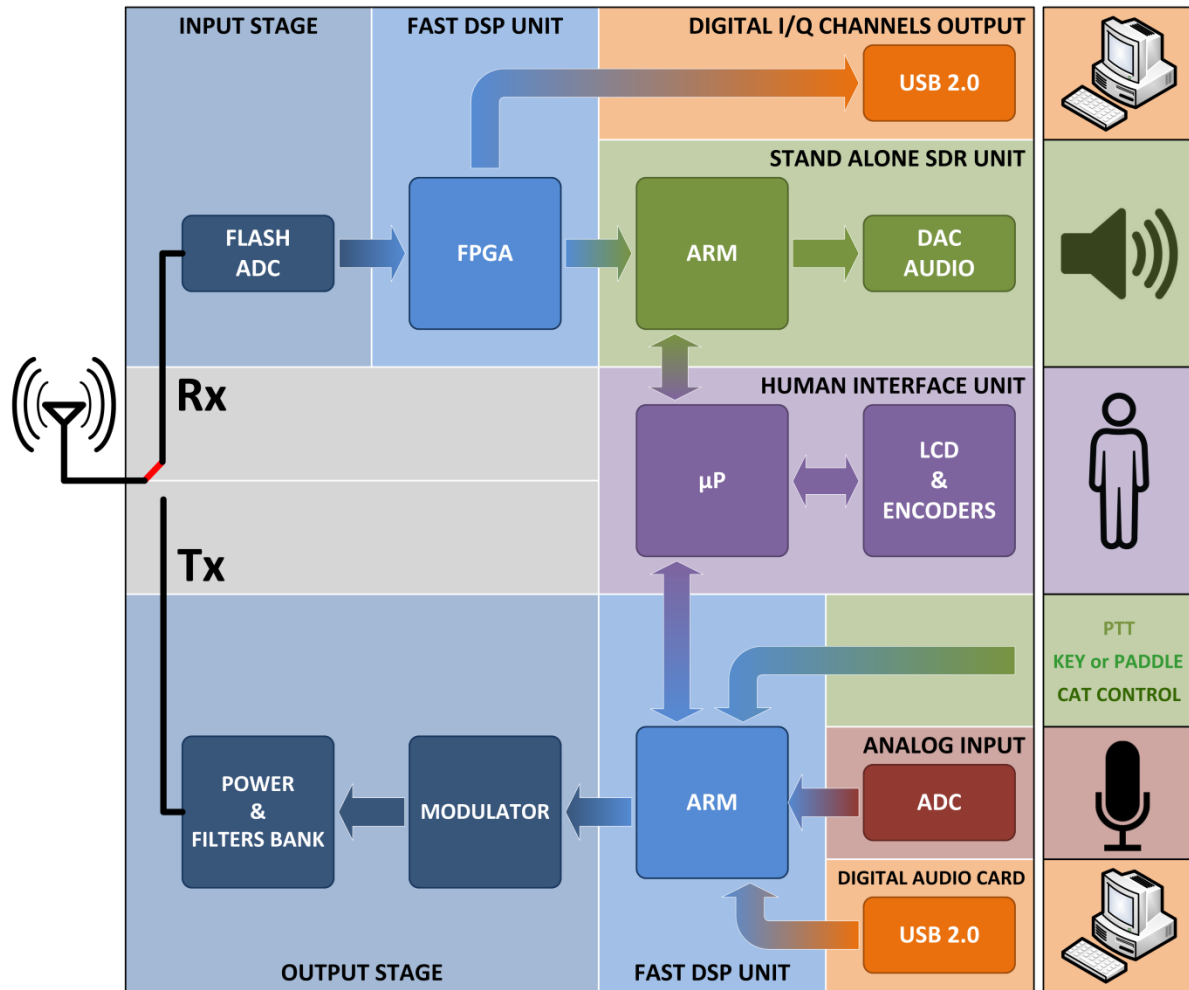

Thank you for choosing the FDM-DUO. It is an innovative dual mode SDR (Software Defined Radio) transceiver covering the frequency range from 9kHz to 54MHz. The FDM-DUO can be used like a standard transceiver in stand-alone mode or in remote mode to exploit the full potential of the ELAD FDM-SW2 software. The FDM-DUO can still be connected to the FDM-SW2 software when it works in "stand-alone" mode.

NOTE: For detailed information about ELAD FDM-SW2 software refer to user manual available at http://sdr.eladit.com/FDM-sw2_20Software/Doc/

1.3.1 Main Features

- Reception frequency range: 9kHz to 54MHz in direct sampling mode.
- Transmission bands: 160m to 6m.
- Selectable output power of 5W or 0dBm RF Out connector.
- Double antenna connectors (RTX for single antenna use or RX/TX for separated antenna use).
- Operating modes: CW, CWR, LSB, USB, AM and FM.
- ADC Linear LTC2165, 16bit @122.88MHz.
- FPGA Spartan 6 XC6SLX25 + Serial Flash for stand-alone mode.
- Stand-alone RX demodulator with STM32F4 ARM floating point μ Controller.
- LPC1766 Cortex M3 for LCD & Keyboard control.
- TX modulator with STM32F4 floating point μ P + AD9957 DDS @368.64 MHz.
- Clocking source Si5338 driven by 10MHz TCXO or external reference input.
- TX modulator from I2S source: MIC using Cirrus CS5346 or USB integrated Codec (CM6510B codec with customized firmware).
- CAT USB interface with FTDI controller.

1.3.2 Block Diagram

1.4 Precautions

- Connect the transceiver only to a power source described in this manual.
- Take care when plugging-in cables, avoid applying sideways pressure that might damage the connectors.
- Avoid operating in wet conditions.
- For better performance and safety, connect the transceiver to good earth ground using a short, heavy, braided cable.
- Ground all outdoor antennas for this receiver using approved methods. Grounding helps protect against voltage surges caused by lightning. It also reduces the chance of build-up of static charge.

2 Panels Description

2.1 Front Panel Description

1 - LCD Display

See [LCD Display](#).

2 - E1 Knob

Available functions : settings of audio volume, squelch for FM, microphone gain (MIC) while transmitting, reception gain control (AGC), noise reduction (NR), noise blanker (NB) and auto notch (AN). See [Knobs functions](#) for more information about knobs use.

3 - Main Knob

Available functions : VFO tuning, memory selection in MEM mode, step selection in VFO mode. See [Knobs functions](#) for more information about knobs use.

4 - Main audio output for speakers and headphones

5 - Auxiliary audio output

6 - E2 Knob

Available functions : settings of reception filters, transmission power (PWR) while transmitting, CW pitch value, and RIT value. See [Knobs functions](#) for more information about knobs use.

7 - MODE and MENU buttons

Operating mode selection (AM, CW, ...). Tune mode activation. "QuickStep" function activation. Access to the setup menu. See [Keys functions](#) for more information about keys use.

8 - VFO and MEM buttons

Basic VFO and memory operations. See [Keys functions](#) for more information about keys use.

2.2 Rear Panel Description

1 - USB Receiver Data Connector

USB 2.0 port. Connect it to computer to use the SW2 software. Please use the supplied cable.

2 - Frequency Reference Input

SMA 50 Ohm connector. Apply an 10MHz 0dBm signal.

3 - RF Output Connector

SMA 50 Ohm connector. 0dBm transmission signal.

4 - Output/Input Antenna Connector

M-type 50 Ohm connector. Antenna output when using two antenna (TX). Antenna input when using only one antenna (RTX).

5 - Input Antenna Connector

M-type 50 Ohm connector. Antenna input when using two antenna (RX).

6 - PTT Output Connector

3.5mm stereo jack connector. PTT Output to connect a switch-box or an amplifier. This output is enabled while transmitting.

RING: do not connect (reserved for future use)

TIP: PTT output (NPN Open Collector transistor, max.: 20V/200 mA)

7 - USB Audio Connector

USB 2.0 port. Connect it to the computer to access to the FDM-DUO soundcard. In input, allows fully digital transmissions. In output, allows to access to the received signal in a digital way.

8 - CAT USB Serial Port

USB 2.0 port. Connect it to the computer to manage the FDM-DUO through the CAT (Computer Aided Transceiver) protocol.

9 - Power Switch

Turn on /off the FDM-DUO.

10 - Power Connector

Voltage to apply : 13.8V. Maximum current consumption : 2.5A DC.

11 - Expansion Port

DB9 connector for external hardware. **THIS IS NOT A STANDARD SERIAL PORT.**

- Pin 1: SPI Latch
- Pin 2: I2C SCL
- Pin 3: SPI Clock
- Pin 4: I2C SDA
- Pin 5: Ground
- Pin 6: TX Duo
- Pin 7: RX Duo
- Pin 8: SPI Data
- Pin 9: +5V

12 – Microphone Connector

Microphone connector with PTT command. Please use the supplied one. The following image show the connector pinout watching the FDM-DUO rear panel.

13 – Key/Paddle connector

3.5mm stereo jack connector.

The menu 37 (CW IN) allows to choose the input type (key or paddle).

The menu 39 (CW KEY) lets you choose the type of connection made when you use a key (i.e., connection on the TIP or on the RING).

The menu 40 (CW TIP) lets you choose the type of connection made when using a paddle (i.e., position of the dot and the dash on the TIP or on the RING).

14 – Ground Connector

For better performance and safety, connect it to an earth ground using a short and wide cable.

3 LCD Display

1. LP: turns on when the low pass filter is active.
ATT: turns on when the attenuator is active.
2. ANT 1 2: displays the number of antennas chosen.
3. IN MIC USB: displays the input selected for transmission in SSB, AM and FM modes. Microphone or USB TX connector.
4. METER: while receiving displays the signal strength in S-units, in transmission displays the output power.
5. Units of measurements of the values displayed. The "S" letter of SWR is also used to indicate that the "QuickStep" function is active.
6. PK: blinks if the ADC of reception is "overloaded".
7. Secondary indication: while receiving displays the signal strength in dBm, in transmission displays the output power in watt.
8. Measurement unit for the secondary indication.
9. LOC: turns on when the Main Knob is locked.
REM: turns on when the remote mode is active, turns off when the stand-alone mode is active.
10. CAT: turns on when a CAT command is received.
SERV: turns on when the service mode is enabled.
11. Operating mode.
12. Input selection for CW mode.
13. Turns on when the external frequency reference is present.
14. E2 selected function.
 - : reception filter setting.
 - PWR: transmission power setting (while transmitting).
 - PITCH: CW pitch frequency setting.
 - RIT: RIT setting.
15. Alphanumeric characters to displaying messages and numeric values.

16. E1 selected function.
 - VOL: main volume setting,
 - SQL: squelch setting (for FM mode),
 - MIC: microphone gain (while transmitting),
 - AGC: automatic gain control settings,
 - NR: noise reduction setting,
 - NB: noise blanker setting,
 - AN: auto notch setting.
17. Displays the selected VFO, A or B.
18. MEM: turns on in memory mode.
 - VFO: turns on in VFO mode.
 - SET: turns on when the setting menu is shown.
 - SET: turns on jointly to MEM when the VFO→MEM menu is active.
19. In memory mode, displays the selected memory index.
 - When in the setting menu, displays the menu number.
 - In split, displays "SP".
20. RX: turns on when receiving.
 - TX: turns on when transmitting.

4 Quick Start

These instructions are intended only for a quick guide, detailed instructions are given later in this manual.

4.1 First of all

To avoid having a forest of buttons and knobs as front panel, each control has different operating modes.

The buttons can be “short pressed” or “long pressed” to activate different functions. The different functions associated to each pressure are written in different colors just above the corresponding button. Each top white label is associated to the “short pressure” on the button, while the lower blue label is associated to the “long pressure”.

Example

A/B
M

swaps A and B VFOs if “short pressed”, and swaps VFO and Memory mode if “long pressed”.
The A/B label refers to the A/B VFO swap obtained with a “short pressure”.
The M label refers to the VFO/Memory mode swap obtained with a “long pressure”.

Long Pressure

A button is “long pressed” when it is kept pressed for more than 1 sec.
This value can be changed using menu 71 (Hold Time) as explained in section 5.9 - Settings Menu List.
Valid values can vary from 500 ms to 2500 ms.

The knobs can be pressed as well to control a different parameter.

Example

The E1 knob usually controls the audio volume, but if pressed once it controls the squelch value.

Tuning

The tuning knob can be pressed to change the tuning step or to enter the “Digit by digit tuning mode”.
The tuning knob operations are detailed in section 5.1.1.1 - Tuning.

4.2 Reset

When first approaching a largely programmable device like FDM-DUO it is nearly unavoidable to mess some parameters with useless values. This is not a problem and should not prevent users from trying the different settings, since a “reset” command is available to bring back the device to the factory settings.

Reset

The reset procedure is quite simple:

- short press the MENU button
- turn the F2 knob until reading 81 DEFAULT on the display
- short press the E2 knob to show “N” on the right of DEFAULT
- turn the E2 knob to change “N” to “Y”
- short press the E2 knob
- wait for the radio reset and restart

4.3 A first trip

A radio like FDM-DUO has many possible application scenarios, both used as a stand-alone device, and paired with its mate software.

In this section the simplest and most common uses will be shown, to allow a first familiarization with FDM-DUO.

4.3.1 Reception

The first use for FDM-DUO is, clearly, reception. To do that, just connect the device to a 12V power supply (or to a battery) and turn it on by using the back switch.

After some secs the device is in reception mode with VFO A enabled.

The main controls are as follows:

Bands

FDM-DUO does not have the “band” concept, thus there is no “band switch”.

There are, though, some special memories holding the value of the low frequency limit of each band as factory settings.

The “Quick Mem” mode can be used to quickly reach the wanted band; it is activated by long pressing the  button.

Press and hold the  button until the display shows the wanted band.

Modes

The  button is used to change to mode: at each short press the mode is changed to the next possible mode.

Tuning

The tuning is done using the main tuning knob.

It is possible to change the tuning step to an alternate value with a short pressure on the  button.

Another short pressure on the  button resets the usual tuning step.

It is possible to change the tuning step to various values with a short pressure on the tuning knob. This leads the tuning knob to select different tuning steps.

Once the desired step has been selected, another short pressure on the tuning knob will bring it back to control the tuning, using the new selected step.

Volume and bandwidth

The volume is set by the E1 knob.

The E2 knob controls the bandwidth.

Enhancing Reception

By clicking on the E1 knob, it is possible to activate some useful options:

1. Audio Volume: this, as seen previously, is the default behavior;
2. Squelch Value: if activated, the related icon on the display blinks;
3. Automatic Gain Control On/Off: if activated, the AGC icon on the display blinks;
4. Automatic Gain Control Speed: it is possible to select Slow, Medium, or Fast;
5. Noise Reduction: it is possible to activate and set the level, if activated the NR icon on the display blinks;
6. Noise Blanker: it is possible to activate and set the level, if activated the NB icon on the display blinks;
7. Auto Notch: it is possible to activate and select two different levels of intervention; when activated, Auto Notch detects and kills an audio persistent tone.

By clicking on the E2 knob, it is possible to activate some useful options:

1. Filter Bandwidth: this, as seen previously, is the default behavior;
2. CW Pitch: this allows to choose the preferred CW reception tone;
3. Receive Incremental Tuning On/Off;
4. Receive Incremental Tuning Value: this allows to move the reception frequency away from the transmission frequency; this function appears only if the previous Receive Incremental Tuning is set to On. More information can be found in section 5.1.1.3 - E2 Receiver Settings.

4.3.2 Transmission

Before transmitting, always check the antenna conditions, so as to avoid problems to the PA; this must be done on a free frequency to avoid disturbing any running QSOs.

Transmission

When FDM-DUO is transmitting, the display changes its backlight.

Using the parameter 73 – “BACKLIGHT CHANGING” it is possible to disable this change if it is deemed annoying, for example when operating in CW Break In mode.

Transmission in AM, SSB and FM Mode

To transmit you just have to use the PTT on the mike and speak.

In case of need it is possible to use the E1 knob to control the “Mic Gain”: a short pressure on the E1 knob lets you control the Mic Gain instead of Volume, and vice versa.

Transmission in CW

Transmission is driven by the CW key.

The E1 knob controls the Volume or the CW speed (in WPM). The two functions can be swapped with a short press on the E1 knob.

Antenna Tuning

Due to the importance of the antenna tuning, FDM-DUO is capable to generate the signal that allows antenna tuning.

This can be done with a long pressure on the **MODE F3** button.

The transmission will end after a time period established by parameter 49 - "TUNE TIME" (factory set to 10 secs) or by a new long pressure on **MODE F3** button.

During the transmission it is possible to show different information: pressing E2 knob it is possible to show frequency or forward power, or reflected power, or Standing Wave Ratio.

During the transmission it is possible to tune the antenna, if needed using an external ATU.

The tuning operations could be refined using parameters 55 – "TUNE POWER" and 56 – "TUNE PTT".

Parameter 55 – "TUNE POWER" allows to select the power to be used when in tune mode, for example reducing the power as a means to protect final power transistors when not sure of the antenna conditions.

Parameter 56 – "TUNE PTT" allows to deactivate an external PA during tuning operations, by disabling the PTT Out signal during tuning operations.

5 User Interface

5.1 VFO Mode

5.1.1 Receive

The VFO mode is the default mode of FDM-DUO. Each VFO memorize the tuning frequency, mode and tuning step

5.1.1.1 Tuning

In this mode, use the Main Knob to tune a frequency.

A short pressure on the main knob enter the frequency step menu

Use the main knob to modify the tuning step, then with a short pressure return in the VFO menu.

With a long pressure over the main knob, the Digit by Digit Frequency tuning mode is activated

In this mode use the main knob to modify the selected digit and E1 or E2 to change witch digit you want to modify. Apply a short pressure on main knob to return in the standard tuning mode.

5.1.1.2 E1 Receiver Settings

Apply a short pressure on the E1 knob to change the E1 selected parameter, the selected parameter icon is turned on in the LCD. Turn until one click the E1 knob to display the parameter value, then turn again E1 to modify the parameter value.

SQL: if the Squelch is turned on the relative SQL icon blinks.

AGC: if the AGC is turned OFF (manual gain mode), the AGC icon blinks.

NR and NB: if the Noise Reducer or the Noise Blanker is turned on the relative NR or NB icon blinks.

5.1.1.3 E2 Receiver Settings

Apply a short pressure on the E2 knob to change the E2 selected parameter, turn until one click the E2 knob to display the parameter value, then turn again E2 to modify the parameter value.

RIT: if the RIT is turned on the relative RIT icon blinks, note that if the RIT is turned off the “Rit Value” menu is not displayed. To modify the RIT value you have to use the E2 knob to change the selected digit and press the **S F4** key to change the digit selection. Keep press the **S F4** key to reset the RIT value.

5.1.1.4 Switch VFO

Use the **A/B M** button to switch VFO-A/B.

5.1.1.5 Store VFO to Memory

Use the **V-M F1** key to store the current VFO settings into a memory

Use E2 knob or main knob to select the destination memory and confirm with a short pressure on E2.

5.1.1.6 “QuickMem” Mode

Keep pressed the **V-M** key to enter the “QuickMem” mode. The memory channels 180 to 199 are reserved for the “QuickMem” selection. Keep pressed the **V-M** key until the desired frequency appears on the LCD display, then release the key and the current VFO is set to the frequency and mode saved in the memory channel. You can use the “FDM-DUO Manager” feature in the ELAD FDM-SW2 software to customize the memory channels.

5.1.1.7 VFO-A = VFO-B

With long pressure on **M-V** key you get VFO-A = VFO-B

5.1.1.8 Change Operating Mode

With a short pressure on the **MODE** button, you can change the receiver mode between the available modes:

When you do not use the FM mode, you can disable it with the setting menu 14 “FM MODE”. The main purpose of this functionality is to not hear the FM exasperating noise when changing between modes and you are not using the FM mode.

5.1.1.9 “QuickStep”

With a short pressure on the **S** key, the “QuickStep” function is activated. This function quickly sets the frequency step preset selected in the “QuickStep” setting menu, press again the **S** key to set the previous frequency step.

5.1.2 Transmit

During the transmission some operations like tuning, VFO selection, mode selection are locked. With a short pressure on the E2 knob it is possible to change with parameter is shown in the main display.

5.1.2.1 Transmission in CW Mode

- CW Message

To begin transmit the CW message selected in the “CW message” menu (number 46), keep pressed the microphone PTT and apply a short pressure on the CW key or paddle. Push the PTT to stop the CW message transmission.

With a long pressure on **S F4** or **MENU F5** if the function has been activated in the “F4 Function” menu or in the “F5 Function” menu, the selected CW message is transmitted. Press the **S F4** or **MENU F5** to stop the CW message transmission.

- E1 transmitter settings

Turn until one click the E1 knob to display the parameter value, then turn again E1 to modify the parameter value. Apply a short pressure on the E1 knob to modify the parameter selection : “Reception Volume” or “CW Words Per Minute”.

- E2 transmitter setting

Use E2 to change the transmission power.

5.1.2.2 *Transmission in AM, SSB and FM Modes*

- **E1 transmitter settings**

Turn until one click the E1 knob to display the parameter value, then turn again E1 to modify the parameter value. Apply a short pressure on the E1 knob to modify the parameter selection : “Reception Volume” or “Microphone Gain”.

- **E2 transmitter setting**

Use E2 to change the transmission power.

5.2 Split Functionality

Usually you can communicate with other stations using a single frequency for receiving and transmitting. In this case, you select only one frequency on either VFO-A or VFO-B. However, there are cases where you must select one frequency for receiving and a different frequency for transmitting. This requires the use of 2 VFOs. This is referred to as "Split".

To activate the Split, select the "Split" option in the F4 or the F5 settings menu, then apply a long pressure on F4 or F5.

In Split the VFO-A is used to receive

The transmission frequency is set to the VFO-B frequency

Notes :

- when the split functionality is activated the "SP" letters appear above the letter of the VFO (A or B),
- the split functionality is not available in MEM mode,
- when the split functionality is activated with the F4/F5 keys it is called stand-alone split, when the split functionality is activated by the FDM-SW2 software it is called remote split,
- when the remote split is active you can change the mode and frequency of the VFO-B only with the FDM-SW2 software, these parameters are then not settable from the FDM-DUO front panel.

5.3 MEM Mode

To activate the memory mode, apply a long pressure on . In MEM mode it is possible to receive, transmit and change the E1/E2 settings in the same way of the VFO mode.

5.3.1 Select and edit a memory

Use the main knob to select a memory. Apply a long pressure on the main encoder to enter the edit memory menu. In this menu it is possible to modify the selected memory frequency in digit by digit mode.

5.3.2 Delete a memory

Apply a long pressure to the  key to enter the delete menu.

Use the E2 knob to set yes or no and make a short pressure on E2 to confirm.

5.3.3 Set memory to VFO

Use the  button to select the VFO-A/B. Use the  key to set in the selected VFO the selected memory frequency and mode. When this function is used, the FDM-DUO automatically switches to the VFO mode.

5.3.4 Change the memory display mode

Apply a short pressure on the **S F4** key to show the memory label in the LCD main display. Press shortly again **S F4** to return to display the memory frequency.

You can use the “FDM-DUO Manager” feature in the ELAD FDM-SW2 software to customize the memory channels.

5.4 Antenna Tuning Mode

In VFO or MEM mode, apply a long pressure on **MODE F3** key to switch to the Antenna Tuning Mode

In this mode a tone at the transmission frequency is generated. Use E2 to modify the transmission power.

The antenna tuning mode have a default timeout of 10s, this value can be modified in the settings menu 49 “TUNE TIME”. However you can apply a long pressure on **MODE F3** key to exit from the antenna tuning mode.

Note:

the timeout is not active if:

- the selected transmission output is set to 0dBm,
- the “SERVICE MODE” is active.

5.5 Maximum settable frequency

The maximum settable frequency is 54MHz. However, you can unlock this limit for experimental purposes until 165MHz by setting the FDM-DUO as follows :

- low pass filter deactivated, menu 2 “RX LP” set to “OFF”,
- output in 0dBm, menu 33 “TX OUT” set to “0dBm”.

5.6 Knobs functions

The following table describes the knob functions for some user interface menu :

| Menu | Action | Main Knob | E1 Knob | E2 Knob |
|--|----------------|--------------------------------------|------------------------------------|------------------------------------|
| VFO | Value modified | Change selected VFO frequency | Enter E1 selection parameter | Enter E2 selection parameter |
| | Short Pressure | Enter STEP menu | Change E1 selected parameter | Change E2 selected parameter |
| | Long Pressure | Switch to DIGIT by DIGIT tuning mode | (2) | (2) |
| STEP | Value modified | Change tuning step value | | |
| | Short Pressure | Exit from STEP Menu | | |
| | Long Pressure | Switch to DIGIT by DIGIT tuning mode | (2) | (2) |
| MEM | Value modified | Select next/previous memory | Enter E1 selection parameter | Enter E2 selection parameter |
| | Short Pressure | | Change E1 selected parameter | Change E2 selected parameter |
| | Long Pressure | Switch to DIGIT by DIGIT tuning mode | (2) | (2) |
| E1 Selection: VOL - SQL - AGC - NR - NB | Value modified | Back to VFO or MEM menu | Modify E1 selected parameter value | Modify E2 selected parameter value |
| | Short Pressure | Back to VFO or MEM menu | Change E1 selected parameter | Change E2 selected parameter |
| | Long Press | Switch to DIGIT by DIGIT tuning mode | (2) | (2) |
| E2 Selection: FILTER - PITCH - RIT | Value modified | Back to VFO or MEM menu | Modify E1 selected parameter value | Modify E2 selected parameter value |
| | Short Pressure | Back to VFO or MEM menu | Change E1 selected parameter | Change E2 selected parameter |
| | Long Pressure | Switch to DIGIT by DIGIT tuning mode | (2) | (2) |
| VFO > MEM | Value modified | Change the destination memory | | Change the destination memory |
| | Short Press | | | Save VFO in the selected memory |
| | Long Pressure | | (2) | (2) |

| Menu | Action | Main Knob | E1 Knob | E2 Knob |
|---|----------------|-----------------------------------|-----------------------------------|-----------------------------------|
| Delete MEM | Value modified | | | Change Yes/No |
| | Short Pressure | | | Confirm Yes/No |
| | Long Pressure | | | |
| SETUP - PARAMETER CHOICE (MENU button) | Value modified | | | Change parameter selection |
| | Short Press | | | Enter parameter setup menu |
| | Long Pressure | | | |
| SETUP - PARAMETER MODIFICATION | Value modified | Parameter coarse variation (1) | Parameter coarse variation (1) | Parameter fine variation |
| | Short Press | | | Save and exit |
| | Long Pressure | | | |
| DIGIT by DIGIT Tuning | Value modified | Modify the current digit value | Change digit selection | Change digit selection |
| | Short Pressure | Switch to standard tuning mode | Switch to standard tuning mode | Switch to standard tuning mode |
| | Long Pressure | | (2) | (2) |

(1) Available only for certain menu.

(2) Press simultaneously E1 and E2 to lock/unlock all the keys and knobs. When the keys/knobs lock function is activated the E1/E2 icons blink.

5.7 Keys functions

The following table describes the keys functions.

| Mode | Pressure | A/B M | V>M F1 | M>V F2 | MODE F3 | S F4 | MENU F5 |
|------|----------|------------------------|----------------------------|----------------------------|---------------------------------------|---------------------------------------|--------------------------|
| VFO | Short | Switch VFO | Enter VFO to MEM menu | - | Change operating mode | Enable/disable Quickstep function | Enter settings menu |
| VFO | Long | Switch to MEM mode | Enter "QuickMem" menu | VFO A = B | Enter/Exit antenna tuning mode | F4 Selected Function | F5 Selected Function |
| MEM | Short | Switch VFO | - | Selected memory to VFO | Change selected memory operating mode | Change memory display frequency/label | Enter settings menu |
| MEM | Long | Switch to VFO mode | Enter delete memory menu | - | Enter/Exit antenna tuning mode | F4 Selected Function | F5 Selected Function |

5.8 Microphone Keys functions

The following table describes the microphone keys functions.

| Mode | Pressure | UP UP Keep pressed | DOWN DOWN Keep pressed |
|------|--------------|---|---|
| VFO | Short | Tune up frequency of one step | Tune down frequency of one step |
| VFO | Keep pressed | After HOLDTIME tune up the frequency according with the acceleration | After HOLDTIME tune down the frequency according with the acceleration |
| MEM | Short | Selected memory to VFO | Selected memory to VFO |
| MEM | Keep pressed | Selected memory to VFO and after HOLDTIME tune up the frequency according with the acceleration | Selected memory to VFO and after HOLDTIME tune down the frequency according with the acceleration |

5.9 Settings Menu List

The following table describes the FDM-DUO settings menu list. To enter the settings menu mode, press the **MENU F5** key. Use E2 to select the menu, then apply a short pressure on E2 to display the current menu setting, if you want to change the setting use the E2 knob and confirm the setting with a short pressure on E2. In some menu you can also use the main knob to change the setting more quickly. To turn back or exit the menu just press **MENU F5**.

| Menu | Title | Description | Available Settings | Default |
|--------------------------|-------------|--|---|------------|
| RECEPTION MENU | | | | |
| 1 | RX ATT | Receiver input attenuation | OFF or ON | OFF |
| 2 | RX LP | Receiver low pass filter status | OFF or ON | ON |
| 3 | SNAP | Round to step | OFF or ON | ON |
| 4 | AGC TH | AGC Threshold | From 0 to 10 | 4 |
| 6 | AUX VOL | Auxiliary output volume | From 0 to 100 | 50 |
| 7 | QUICKSTEP | Step selected for the "QuickStep" mode | 1Hz, 5Hz, 10Hz, 25Hz, 50Hz, 100Hz, 250Hz, 500Hz, 1kHz, 2kHz, 3kHz, 4.5kHz, 5kHz, 7.5kHz, 9kHz, 10kHz, 12.5kHz, 25kHz, 50kHz, 100kHz, 125kHz, 250kHz, 500kHz, 1MHz | 1kHz |
| 8 | CW MUTE | Sets the mute status during CW transmission | OFF or ON | OFF |
| 9 | xSB MUTE | Sets the mute status during AM, FM or SSB transmission | OFF or ON | ON |
| 10 | FILBYPASS | Sets the pre-selection filters bypass, available only in reception in remote/mixed mode and in split | OFF or ON | OFF |
| 11 | TO NE VOL | Sidetone volume | From 0 to 100 | 5 |
| 12 | SET CW MODE | Enables/disables the CW reverse mode | YES or NO | NO |
| 14 | FM MODE | Enable / disable FM mode | OFF or ON | ON |
| TRANSMISSION MENU | | | | |
| 30 | TX ENABLE | Enables the transmission | OFF or ON | ON |
| 31 | ANTENNAS | Number of antenna used | 1 or 2 | 1 |
| 32 | TX IN | Transmission input in AM, FM and SSB. The TXIN setting is automatically set to MIC if the PTT button is pressed or USB if the CAT command TX is received | Microphone, USB soundcard, AUTO | Microphone |
| 33 | TXOUT | Transmission output selection | PWR (ant. RTX) or 0dBm (RFOUT) | PWR |
| 34 | TX POWER | Transmission power selection | 0.3W, 0.5W, 1W, 1.2W, 1.5W, 2W, 3W, 4W, 5W or max available | 5W |

| Menu | Title | Description | Available Settings | Default |
|------|-------------|---|---|----------------|
| 35 | TX BW | Transmission filter selection for FM, AM and SSB mode. | 50Hz - 4000Hz 100Hz - 2700Hz 100Hz - 3000Hz 100Hz - 3500Hz 100Hz - 4000Hz 200Hz - 2700Hz 200Hz - 3000Hz 200Hz - 3500Hz 200Hz - 4000Hz 300Hz - 2700Hz 300Hz - 3000Hz 300Hz - 3500Hz 300Hz - 4000Hz | 100Hz - 2700Hz |
| 36 | MIC GAIN | Microphone Gain | ±12dB in step of 0.5dB | 0dB |
| 37 | CW IN | CW transmission input selection. The Key+DTR option appears only when the USB is connected and is automatically disabled when the USB is disconnected, re-setting the selection to Key. This is done to avoid unwanted TX operations due to USB setup transient phases. | Key, Paddle, Key+DTR, Paddle+DTR | Key |
| 38 | CW DELAY | PTT release delay in CW | 0 to 1000ms | 240ms |
| 39 | CW KEY | Selects where the key is connected on the key/paddle jack | TIP or RING | TIP |
| 40 | CW TIP | Selects the dot or dash on the tip of the key/paddle jack | DOT or DASH | DASH |
| 41 | CW IAMBIC | Sets the iambic mode | A or B | A |
| 42 | CW RX WPM | CW characters decoding speed | 5 to 90 words per minute | 12 |
| 43 | TX RX TH | CW threshold for a tone recognition | AUTO or from 1 to 10 | AUTO |
| 44 | CW DECODE | Enables/disables the automatic CW decoding | OFF or ON | OFF |
| 45 | CW TX WPM | CW transmission speed | 5 to 90 words per minute | 10 |
| 46 | CW MSG | CW message selection | Msg 1 to Msg 10 | Msg 1 |
| 47 | TX VIEW | Selects the default parameter to be displayed during a transmission | Frequency, forward power, reflected power, SWR | Forward power |
| 48 | UP/DOWN ACC | MIC UP / DOWN acceleration of the microphone buttons | 1, 2, 3 | 2 |
| 49 | TUNE TIME | Antenna tuning mode timeout. Active only if the selected transmission output is the antenna. Not active in service mode | 3 to 120 seconds | 10s |
| 50 | ATT ON TX | Attenuation in transmission mode | OFF or ON | OFF |
| 51 | NOISE TH | Sets the noise gate threshold. Available only if TXIN is set to MIC | OFF,1,2,... 10 | 2 |
| 52 | COMP GAIN | Sets dynamic compression gain. Available only if TXIN is set to MIC | OFF,1,2,... 10 | 7 |
| 53 | TX FM DEV | Transmission FM deviation | 2.5kHz, 5kHz | 2.5kHz |
| 54 | PTT | PTT control | PTT, PTT+RTS | PTT |

| Menu | Title | Description | Available Settings | Default |
|------------------------------|---------------------|--|---|--------------------------|
| 55 | TUNE POWER | Sets the TUNE power | 0.3W, 0.5W, 1W, 1.2W, 1.5W, 2W, 3W, 4W, 5W or max available | 5W |
| 56 | TUNE PTT | Sets the PTT OUT behavior when in tune mode | YES or NO | YES |
| 57 | PTT DELAY | PTT OUT anticipation and delay in SSB, AM and FM | 0 to 1000ms | 0ms |
| 58 | PTT ON CW | Sets the microphone PTT key behavior when CW mode is selected | CW message preparation, PTT out assertion | CW message preparation |
| GENERAL SETTINGS MENU | | | | |
| 60 | FR OFFSET | Enables/disables the frequency offset for the visualization | OFF or ON | OFF |
| 61 | OFS VALUE | Frequency offset value for the visualization | +/- 99.999999999 GHz. See Frequency visualization offset menu | 0Hz |
| 62 | F4 | Selects the F4 key function when a long pressure is applied | None / Send CW Message / Split / Main encoder tuning lock / Switch between CW and CWR | Send CW Message |
| 63 | F5 | Selects the F5 key function when a long pressure is applied | None / Send CW Message / Split / Main encoder tuning lock / Switch between CW and CWR | Main encoder tuning lock |
| 70 | CAT BAUD | CAT serial port baud rate | 9600, 38400, 57600, 115200 | 38400 |
| 71 | HOLD TIME | Hold time to detect a long pressure | From 500 to 2500ms | 1000ms |
| 72 | REPT TIME | Repetition time when a key is pressed | From 100 to 1500ms | 600ms |
| 73 | TX BACKLIGHT ON/OFF | Activates backlight when changing operating mode (Stand Alone Rx, Remote Rx, Stand Alone CW Tx, Remote Tx) | YES or NO | YES |
| SERVICE MENU | | | | |
| 80 | SERVICE | Enables Service mode | ON or OFF | OFF |
| 81 | DEFAULT | Restores default parameters | YES or NO | NO |
| 82 | UI UPDATE | If Service mode is active, enables the firmware update mode | YES or NO | NO |
| 83 | VIEW SN | Displays the FDM-DUO serial number | Parts of the SN | First part |
| 84 | VIEW FW | Displays the FDM-DUO firmware versions | Firmware | UI |
| 85 | CLK ADJ | Sets the internal clock correction value. It is used to have a fine frequency setting. In case of "Ref In" utilization, this parameter is not relevant. | ±50000 dots (not Hz) | - |

5.9.1 Frequency visualization offset menu

The frequency visualization offset is helpful when using a transverter. The Frequency offset is set in digit by digit mode with some improvements to set a signed 10 digit offset in a 9 digit display.

- E2: Select the digit to modify
- Main encoder: modify the selected digit value
- E1: change the visualization
 - kHz: the 8 most significant digit of the frequency offset are displayed
 - Hz: the 9 least significant digit of the frequency offset are displayed
- E1 or Main encoder short pressure: change the sign of the offset (+/-)
- E2 short pressure: save the setting

EXAMPLES:

Frequency offset value: +10,000,034,120 Hz

- kHz Display mode

- Hz Display mode

5.10 Transmission source

The transmission source in AM, FM and SSB modes depends on the TX IN setting (menu 32) and on what does the user. The table below shows the different possibilities.

| User action | Source | | |
|------------------------|-------------|-------------|--------------|
| | TX IN = MIC | TX IN = USB | TX IN = AUTO |
| PTT push on microphone | Microphone | TX USB port | Microphone |
| TX CAT command sending | Microphone | TX USB port | TX USB port |
| RTS signal assertion* | Microphone | TX USB port | TX USB port |

* to use RTS as PTT, enable the functionality in the PTT menu (number 54).

6 CAT Remote Control

6.1 General Specifications

The FDM-DUO transceiver uses a full-duplex, asynchronous, USB serial interface for communicating through the USB CAT port. Each data is constructed with 1 start bit, 8 data bits, 1 stop bit, no parity is used (8N1). The baud rate is selectable in the [70] CAT BAUD menu. Available values are 9600, 38400, 57600, 115200 bps.

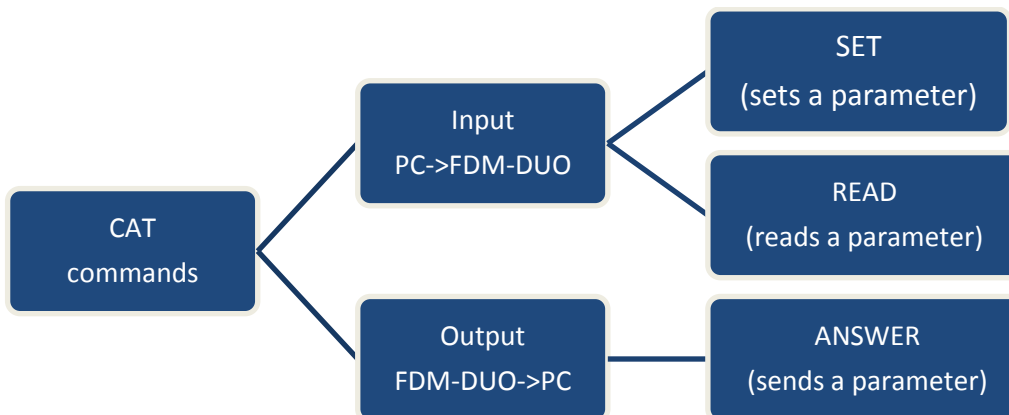

The FDM-DUO implements proprietary commands and also a subset of the Kenwood TS-480 command set. Some of those TS-480 commands have no effect on the transceiver, they only ensure the compatibility of the FDM-DUO with Ham Radio Deluxe.

6.2 Commands Types

A CAT command is composed of an alphabetical part, various parameters and a terminator that signals the end of the command. For example to set the VFO-A to 14MHz the command is: "FA00014000000;" with :

- "FA": alphabetical command,
- "00014000000": parameter,
- ";": terminator.

CAT commands can be classified as shown below:

EXAMPLE

- To set the VFO-A to 14MHz the PC sends the **SET command type** "FA00014000000;"
- To read the VFO-A frequency the PC sends the **READ command type** "FA;", the **ANSWER response type** is returned to the PC: "FA00014000000;".

NOTE

Some particular rules about the CAT commands on the FDM-DUO :

- not all the commands have the three types of command/response (**SET**, **READ** and **ANSWER**),
- normally, send the **SET command type** will not cause the FDM-DUO to send the **ANSWER response type** but if a command does not have a **READ command type** and has the **SET and ANSWER type**, then send the **SET command** will cause the FDM-DUO to send the **ANSWER response type**.

6.3 Cat Commands

6.3.1 Commands list

| COMMAND | FUNCTION | SET | READ | ANS. |
|---------|-----------------------------|-----|------|------|
| AC | TUNE MODE STATUS | - | YES | YES |
| AN | ANTENNAS | YES | YES | YES |
| AT | RF ATTENUATOR | YES | YES | YES |
| AX | ATTENUATION ON TRANSMISSION | YES | YES | YES |

6.3.3 Compatibility commands

The following commands have no effect on the transceiver, they only ensure the compatibility of the FDM-DUO with Ham Radio Deluxe.

7 Software & Driver Installation

7.1 Software installation

7.1.1 First-time install in Windows 8 and Windows 7

Double-click the file “setup.exe” in the provided USB stick.

The windows installer first installs the prerequisites:

- Microsoft VC++ 2010 Runtime libraries
 - Microsoft .NET Framework 4.0 (Only for Windows 7)
- and then the FDM-SW2 software.
- Click on “Accept” (Only for Windows 7)

Click on “Install”

Click on “Yes”

Click on Install

Microsoft Visual C++ 2010 x86 Redistributable installation is complete, click on “Finish”

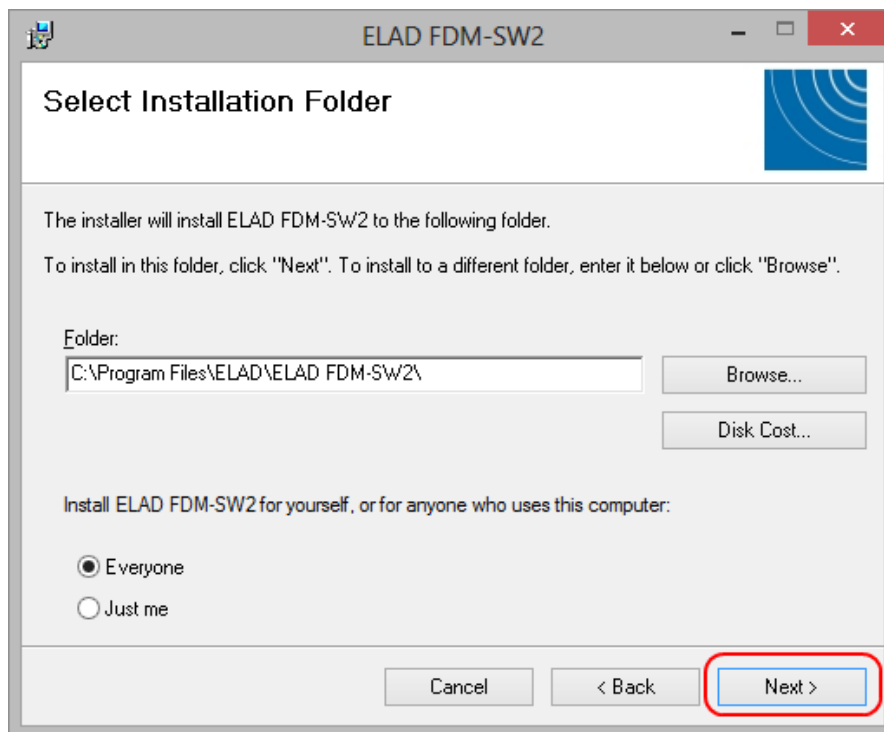

Click on “Yes” to start the installation of the .Net Framework 4.0 (Only for Windows 7)

Click to “Next” to start the FDM-SW2 software installation

Chose the installation folder, then click on “Next”

Click on “Next”

Click on “Yes”

7.1.2 First-time install in Windows XP

Double-click the file “setup.exe” in the provided USB stick.

Click on “Accept”

Click on “Install”

Click on “Install”

Click on Next to install the FDM-SW2 software

Select the installation folder, then click on “Next”

Click on "Next"

The FDM-SW2 Software installation is completed

7.1.3 Update an existing software version

Double click on file ELAD_FDM_SW2_V_x.xx.msi included in the update and follow the instructions.

7.2 USB driver

7.2.1 USB driver installation in Windows 8 and Windows 7

7.2.1.1 First driver installation

To install ELAD FDM-DUO driver, connect FDM-DUO USB RX port to a USB 2.0 socket on PC end power on the device. When Windows detects the new hardware, follow the steps listed below to install driver correctly:

Open **Control Panel** from **Start** menu, select “System” and “Device Manager”. Expand “Other Devices” node: FDM-DUO.

Select FDM-DUO, right click on it and execute “Update driver software”.

When Windows starts the installation procedure, select the option “Browse my computer for driver software” (the second option).

In the next dialog-box, insert the driver folder location using “Browse” button and check the option “Include subfolders”. In this way manual driver search is enabled

For 32 bit system select the folder: **C:\Program Files\ELAD\ELAD FDM-SW2\ELAD_FDM_Driver**

For 64 bit system select the folder: **C:\Program Files (x86)\ ELAD\ELAD FDM-SW2\ELAD_FDM_Driver**
Then click “Next”.

Click Install.

Let the hardware installation automatically completes and, at the procedure ending, click on “Close”; then disconnect and connect FDM-DUO device on the same USB socket.

Now ELAD FDM-DUO USB driver is installed on your PC.

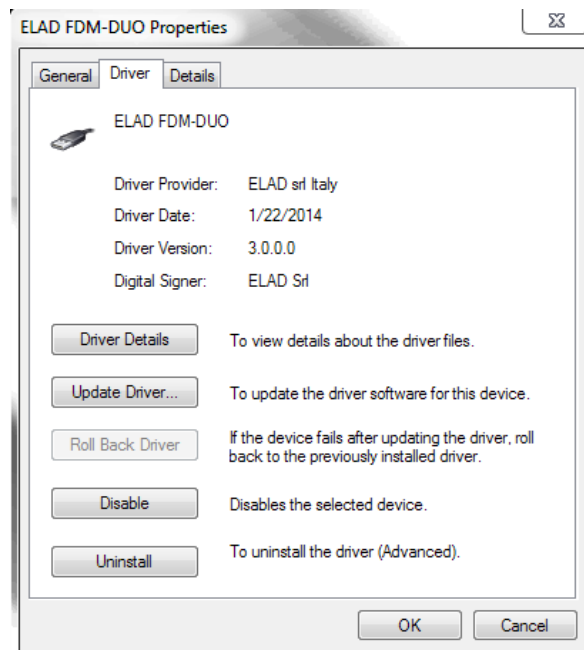

7.2.1.2 Driver installation verify

To verify FDM-DUO driver current version, connect the device to USB socket (where the device driver is already installed) and power on the device. Then open **Control Panel** from **Start** menu. Click on “System” and select “Device Manager”.

Expanding “ELAD Samplers” node, right click on “ELAD FDM-DUO” and select “Properties”.

When dialog box opens, select “Driver” label: you must read provider name, current driver release date and current driver version. The figure shows an old FDM- DUO driver version.

7.2.1.3 Manual driver update

To update FDM-DUO driver, connect the device to USB RX socket (where the device driver is already installed) and power on the device. Then open **Control Panel** from **Start** menu. Click on “System” and select “Device Manager”.

Under “ELAD samplers” list select “ELAD FDM-DUO”, right click on it and execute “Update driver”.

When Windows starts the installation procedure, select the last option “Browse my computer for driver software”.

In the next dialog-box, disable the option “Include subfolders” and choose “Let me pick from a list of device drivers on my computer”. Don’t click “Next”.

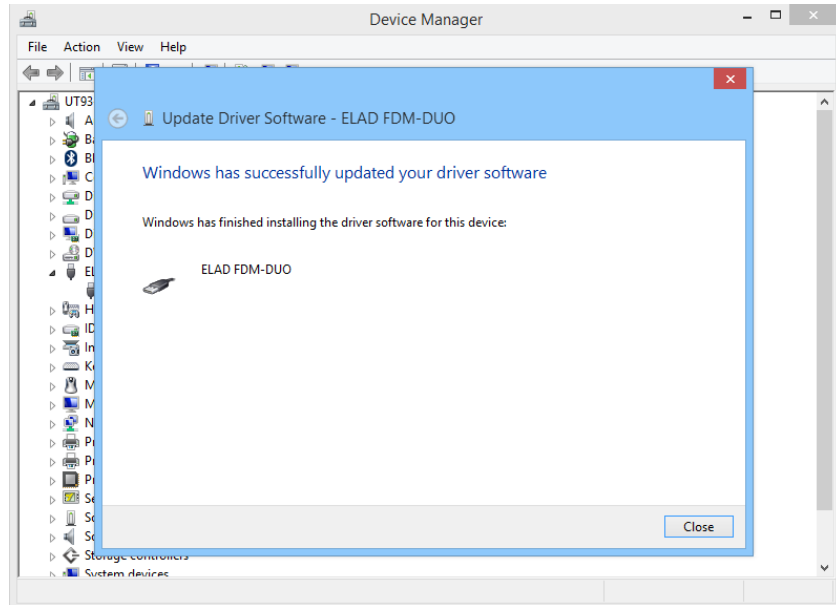

Verify that “Show compatible hardware” option is checked and ELAD FDM-DUO is selected: then click on “Have a Disk”. In this way the manual driver update is enabled. Don’t click “Next”.

Click on “Browse” and search for FDM-DUO driver update folder location; then open winusb_fmgsampler.inf file. Click “OK” and then “Next”.

Let the hardware installation automatically completes and, at the procedure ending, click on “Close”; then disconnect and connect FDM-DUO device on the same USB socket.

To verify that a correct update is done, enter “Device Manager” in Control Panel; under “ELAD samplers” label select ELAD FDM-DUO driver (see sub-chapter [Driver installation verify in Windows 8 and Windows 7](#)): right click on it and choose “Properties”: select “Driver” label to visualize the last driver version (an example is depicted in figure below).

7.2.2 USB driver installation in Windows XP

7.2.2.1 First driver installation

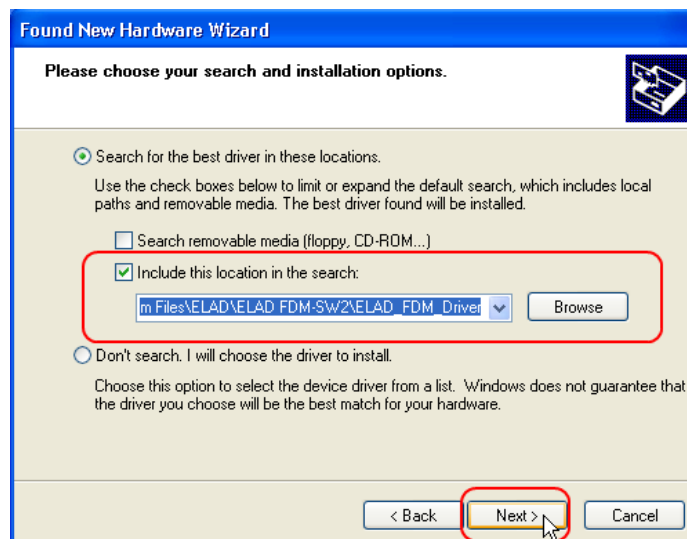

To install ELAD FDM-DUO driver, connect FDM-DUO USB RX port to a USB 2.0 socket on PC and power on the device. Windows XP detects the new hardware and starts the hardware installation wizard. Then, next steps to install FDM-DUO driver are listed below:

At the first dialog box, select the last option “No, not this time” and “Next”.

Select “Install from a list or specific location (Advanced)” and “Next”.

In the next dialog-box, check the options “Search for the best driver in these location” and “Include this location in the search” to enable manual driver search. Clicking on “Browse”, select the path where the driver folder is located: **Local Drive (C:) \Programs\ELAD\ELAD FDM-SW2\ELAD_FDM_Driver**. Then click “Next”.

Let the hardware installation automatically completes and click on “Finish”; then disconnect and connect FDM- DUO device on the same USB socket.

Now ELAD FDM- DUO driver is installed on your PC.

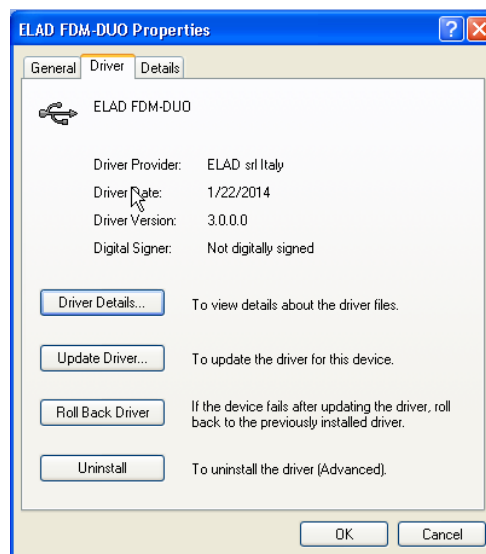

7.2.2.2 Driver installation verify

To verify FDM-DUO driver current version, connect the device to USB socket (where the device driver is already installed) and open **Control Panel** from **Start** menu. Click on “System” and select “Device Manager” under “Hardware” label.

Expanding “ELAD Samplers” node, right click on “ELAD FDM-DUO” and select “Properties”.

When dialog box opens, select “Driver” label: you must read provider name, current driver release date and current driver version. The old ELAD FDM-DUO driver version is shown in figure below as example.

7.2.2.3 Manual driver update

To update FDM-DUO driver, connect the device to USB socket (where the device driver is already installed) and power on the device. Then open **Control Panel** from **Start** menu. Click on “System” and select “Device Manager” under “Hardware” label.

Select “ELAD FDM-DUO” from “ELAD Samplers” list, right click on it and execute “Update driver ”

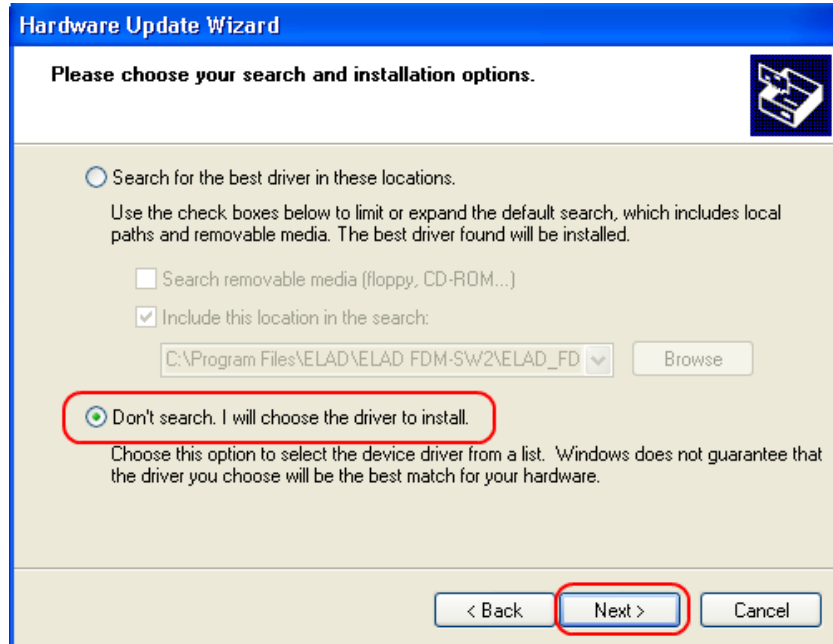

Now Windows XP launches the hardware update wizard: select the last option “No, not this time” and “Next”.

At next step select “Install from a list or specific location (Advanced)” and “Next”.

Then, disable all check-boxes that the system automatically sets and choose the last option for manual driver update, as depicted in figure. Select “Next”.

Verify that “Show compatible hardware” option is checked and ELAD FDM-DUO is selected: then click on “Have a Disk”. Don’t click “Next”.

Click on “Browse” and search for the FDM-DUO driver update folder location; then open `winusb_fdmsampler.inf` file, as depicted in figure. Click “OK” and then “Next”.

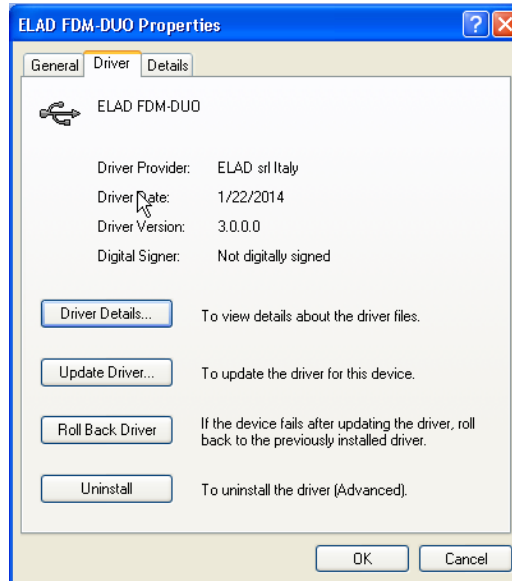

Now driver update starts: at next dialog box select “Continue Anyway” and ignore the warning.

Let the hardware update automatically completes and, at the procedure ending, click on “Finish”; then disconnect e connect FDM-DUO device on the same USB socket.

To verify that a correct update is done, enter “Device Manager” from **Control Panel**; under “ELAD Samplers” list, select ELAD FDM-DUO driver (see chapter [Driver installation verify in Windows Xp](#)) right click on it and choose “Properties”. Select “Driver” label to visualize the last driver version (an example is depicted in figure below).

7.2.3 USB sound card

Connect the TX USB port of FDM-DUO to a USB 2.0 port of the PC and power on the device. Then open the PC device manager. No driver installation is required for this device, just expand the node Audio inputs and outputs and check the FDM-DUO audio device.

7.2.4 USB CAT Serial port

Connect the CAT USB port of FDM-DUO to a USB 2.0 port of the PC . Windows download and install automatically the FTDI FT232R serial port driver.

When the installation process ends, open the windows device manager and check the FDM-DUO USB serial port in the node Ports (COM & LPT).

8 Firmware update

This section was removed from this manual. Please download the specific documentation about firmware update here: <http://sdr.eladit.com/FDM-DUO/>.

9 Technical Specifications

| ELAD FDM-DUO TECHNICAL SPECIFICATIONS | | | Rev. 1 04/2015 |
|--|---|--|-------------------|
| GENERAL | USB 2.0 Ports (Peripheral Control) | 3 (RX, TX, CAT) | |
| | Master Clock Frequency | 122.88 MHz (Rx), 368.64 MHz (Tx) | |
| | Master Clock Phase Noise | -136 dBc @ 100 kHz, -130 dBc @ 10 kHz | |
| | 10 MHz Reference Clock Stability | 2.5 ppm TCXO within temperature range 0°C ÷ 40°C (32°F ÷ 104°F) Typical Stability within temperature range 15°C ÷ 35°C (59°F ÷ 95°F) 0.1 ppm i.e. 1Hz @ 10 MHz | |
| | Frequency Resolution | 1 Hz min. | |
| | Antenna Connectors / Impedance | 2x SO-239 / 50 Ohm | |
| | RF-OUT Connector / Impedance | SMA female / 50 Ohm | |
| | Power Supply Requirements | 13.8 Vdc ± 10% | |
| | Current Drain (Rx / Tx 5 W) | <500 mA @ 13.8 V / <2.2 A @ 13.8 V | |
| | Dimensions (W x D x H) | 180 mm (7.00") x 155 mm (6.10") x 70 mm (2.75") including knob and connectors 180 mm (7.00") x 130 mm (5.10") x 70 mm (2.75") enclosure only | |
| | Weight (approximate) | 1.2 Kg (2.4 lb) | |
| Operating Temperature Range | 0°C ÷ 40°C (32°F ÷ 104°F) | | |
| Stand Alone Mode | RECEIVER | | |
| | Modes | CW, USB, LSB, AM, FM | |
| | ADC Sampling Rate / Resolution | 122.88 MHz @ 16 bits | |
| | Wideband Frequency Coverage | 10 kHz ÷ 54 MHz | |
| | IQ Channel Bandwidth | 192 kHz (24 bits) | |
| | Attenuator | 12 dB | |
| | Spurious Response | >105 dBfs @ 0 dB attenuation | |
| | DDC Image Rejection Ratio | >100 dB | |
| | Receive Low Pass Filters Bandwidth | SSB: 300 Hz, 600 Hz, 1 kHz, 1.6 kHz ÷ 3.1 kHz (Step 100 Hz), 4 kHz, 5 kHz, 6 kHz AM: 2.5 kHz ÷ 6 kHz (Step 500 Hz) CW: 100 Hz & DR ⁽¹⁾ Level 1 ÷ 4, 100 Hz, 300 Hz, 500 Hz, 1kHz, 1.5 kHz, 2.6 kHz FM: Voice Narrow, Voice Wide, Data | |
| | Headphones Connector / Impedance | 3.5 mm Stereo Jack / 8 Ohm | |
| | AUX OUT Connector / Impedance | 3.5 mm Stereo Jack / 8 Ohm | |
| | TRANSMITTER | | |
| | Modes | CW, USB, LSB, AM, FM | |
| | TX DAC Sampling Rate & Resolution | 368.64 MHz @ 16 bits | |
| | RF Output Power | 5 W Nominal, Adj. Steps: 0.3 W, 0.5 W, 1.0 W, 1.2 W, 1.5 W, 2.0 W, 3.0 W, 4.0 W, 5.0 W, MAX | |
| | Amateur Band Coverage at Rated Power Output | 160 m ÷ 6 m | |
| | Low Pass PA Filter Bands | 160 m ÷ 6 m Ham bands only | |
| | RF-OUT Output Power | -2 dBm Typical; 0 dBm Max | |
| | RF-OUT Frequency Coverage | 100 kHz ÷ 165 MHz | |
| | Modulation System | IQ Digital | |
| | Maximum FM Deviation | 5 kHz | |
| | Carrier Suppression / Unwanted Sideband Suppression | >80 dBc Typical / >80 dBc Typical | |
| | Harmonic Radiation 1.8 - 50 MHz Amateur Bands | >60 dBc | |
| | 3 rd Order IMD | 160 m ÷ 10 m: >30 dB @ 5 W PEP; 6 m: >25 @ 5 W PEP | |
| | Transmit Filters Bandwidth | SSB, AM: 300 Hz ÷ 2700 Hz Band Pass up to 50 Hz ÷ 4000 Hz Band Pass FM: 2500 Hz or 5000 Hz Low Pass | |
| | Microphone Connectors | RJ45 ICOM Compatible | |
| Microphone Impedance | 600 Ohm Nominal (200 ÷ 10 kOhm) | | |
| PTT-OUT Connector | 3.5 mm Stereo Jack, NPN Open Collector Output 20 V Max / 200 mA | | |
| KEY-PAD Connector | 3.5 mm Stereo Jack | | |
| PC Based Mode (ELAD FDM-SW2 Software) | RECEIVER | | |
| | Modes | CW, CW SH+, CW SH-, CW Narrow Band, USB, LSB, AM, FM, WB FM (Stereo + RDS), SYNC AM, DSB, RTTY, ECSS, DRM | |
| | IQ DDC Sampling Rate / Resolution | 1 Channel (Slice) @ 32 bits: 192 kHz, 384 kHz, 768 kHz, 1536 kHz, 3072 kHz 1 Channel (Slice) @ 16 bits: 6144 kHz 2 Channels (Slices) @ 32 bits: 192 kHz, 384 kHz | |
| | Simultaneous Receivers | 4 with 1 Channel (Slice) DDC, 8 with 2 Channels (Slices) DDC | |
| | Software Defined Filters | Double IF Notch Filters, Continuous Variable Band Filter | |
| | Advanced DSP Features | Noise Blanker, Adaptive Noise Reducer, Adaptive Auto Notch, AGC | |
| | Main Software Features | Recording and playback of IF and audio data stream, EIBI database support, Dx-Cluster spot visualization (Internet connection required), built in CAT protocol and Omni-Rig Server, double output channel (for VAC), support for external down-converter, WoodBox Tmate and Tmate2 compatibility | |
| | Software Visualization | Input Data (Spectrum + Waterfall), IF Data (Spectrum + Waterfall), Audio Data (Spectrum + Waterfall) | |
| | TRANSMITTER | | |
| | Modes | CW, USB, LSB, AM, FM, IQ | |
| | Transmit Bandwidth | CW, USB, LSB, AM: default 300 ÷ 2700 Hz, up to 50 ÷ 4000 Hz FM: 2500 or 5000 Hz Low Pass | |
| | Advanced DSP Features | Equalizer, VOX, Audio Compressor, Overshoot Control (CESSB Algorithm), Level Limiter | |
| | Main Software Features | Playback of audio files (up to 4 presets) | |
| | Software Visualization | Waveform Monitor (Input Audio, Equalizer Output, Compressor Output, Filter Output, Overshoot Controller Output, Modulator Output, Limiter Output) | |
| | <small>(1) Digital Resonator</small> | | |
| <small>All stated specifications and other product information provided in this document are subject to change without notice or obligation.</small> | | | |

Product Warranty

ELAD S.r.l. warrants the FDM-DUO for a period of 2 years inside Europe, and for a period of 1 year outside Europe unless otherwise specified. Warranty begins from the purchase date. All FDM-DUO will be repaired or replaced due to malfunction resulting from no fault of the end user. This warranty covers normal intended usage of the product and does not cover misuse, abuse, accidents, viruses, unauthorized service parts or the combination of other unauthorized branded products used in conjunction with the FDM-DUO.

Declaration of Conformity (EC)

The product marked as

FDM-DUO

manufactured by

Manufacturer: ELAD S.r.l.
Address: Via Col De Rust, 11 - Sarone
33070 CANEVA (PN)

is produced in conformity to the requirements contained in the following EC directives:

- R&TTE Directive 1999/5/CE
- EMC Directive 2004/108/CE
- Low Voltage Directive 2006/95/CE
- RoHS Directive 2011/65/CE

The product conforms to the following Product Specifications:

Emissions & Immunity:

ETSI EN 301 489-1 V1.9.2
ETSI EN 301 489-15 V1.2.1
ETSI EN 301 783-2 V1.2.1

Safety:

EN 60950-1:2006 + A11:2009 + A1:2010 + A12:2011 + A2:2013

And further amendments.

This declaration is under responsibility of the manufacturer:

ELAD S.r.l.

Declaration of Conformity (FCC)

The product marked as

FDM-DUO

manufactured by

Manufacturer: ELAD S.r.l.
Address: Via Col De Rust, 11 - Sarone
33070 CANEVA (PN)

complies with the following requirements:

- FCC (Federal Communications Commission) Part 15

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
